

Orile Labs - Systems Built for Power

Who We Are

Orile Labs is a Nigerian technology company engineering secure systems, applied AI, and digital infrastructure for organizations that require absolute control over their data and operations.

We design, deploy, and protect the digital backbones of ministries, financial institutions, and critical industries.

Our Focus

Pillar	Description
Secure Systems	Internal email, document, and data environments with clearance-based access.
Applied AI	Decision-support tools, anomaly detection, and intelligence pipelines for real operations.
Cloud & Infrastructure	Private, high-assurance cloud built for Nigerian data residency and 24/7 uptime.
Data Sovereignty	We ensure national data stays under national control - physically and legally.

Why It Matters

- 80% of Nigerian government communication still runs through foreign platforms (Meta, Google, etc.).
- These channels expose sensitive state data to external surveillance and influence.
- Orile Labs builds sovereign, local systems-engineered in Nigeria, hosted in Nigeria, and governed by Nigerian law.

Our Advantages

- Zero-Trust Architecture - identity, device, and context verified per request.
- Local Jurisdiction - servers and backups within Nigeria.
- Audit-Ready - immutable logs for compliance and investigations.
- Rapid Delivery - concept to working pilot in under 10 days.

Impact

- Strengthens digital independence.
- Reduces reliance on foreign infrastructure.
- Creates skilled Nigerian tech jobs in AI, cloud, and security.
- Positions Nigeria as a sovereign digital power in West Africa.
